Title: Perfect score: Sequence: US-09-661-9928-106 82 1 FRNRGMTALLKVSSCD 16

Run on:

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

283308 segs, 96168682 residues

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : PIR\_76:\* pir2:\* pir3:\* pir4:\* pirl:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

"Sequence of the murine factor VIII cDNA.";

"Sequence of the murine factor VIII cDNA.";

Genomics 16:374-379(1993).

-i- FUNCTION: FACTOR VIII, ALONG WITH CALCIUM AND PHOSPHOLIPID, ACT6

AS A COFACTOR FOR FACTOR IXA WHEN IT CONVERTS FACTOR X TO THE

ACTIVATED FORM, FACTOR XA.

-i- SUBCELLULAR LOCATION: Extracellular.

-i- TISSUE SPECIFICITY: FOUND IN MOST TISSUES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-JUN-1994 (Rel. 29, Created)

deficient Chinese hamster ovary cell mutant and deletion analysis
Mol. Cell. Biol. 14:5458-5465(1994).
FUNCTION: SOMEMHAT IMPLICATED IN THE BIOGENESIS OF PEROXISOME:
-:- SUBCELLULAR LOCATION: Integral membrane protein. Peroxisomal.
-:- SIMILARITY: Contains 1 RING-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 p52191; Q9J187;
